

std::true\_type

```
graph BT; A["std::math::enable_if_t<writable_vector_data_v<typename T::column_vector_type>>>"] --> B["std::true_type"]
```

The diagram illustrates a C++ type hierarchy. At the bottom is a large gray box representing the type `std::math::enable_if_t<writable_vector_data_v<typename T::column_vector_type>>>`. A blue arrow points from the top of this box to a white box above it, which is labeled `std::true_type`. The white box is divided into three horizontal sections, with the top section containing the text `std::true_type`.

```
std::math::enable_if_t<writable_vector_data_v<typename  
T::column_vector_type>>>
```
