

`std::false_type`

The diagram illustrates an inheritance relationship. At the bottom is a gray box representing the base class `std::math::concepts::has_const_subvector_func< T, class >`. It has three horizontal sections, with the top one containing the class name. Above it is a white box representing the derived class `std::false_type`. It also has three horizontal sections, with the top one containing the class name. A blue arrow points from the top of the gray box to the bottom of the white box, indicating that `std::false_type` inherits from `std::math::concepts::has_const_subvector_func< T, class >`.

`std::math::concepts
::has_const_subvector
_func< T, class >`
