

std::true\_type

```
classDiagram
    class A["std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >"]
    class B["std::true_type"]
    A --|> B
```

The diagram consists of two class boxes. The top box, labeled 'std::true\_type', has three horizontal compartments: the top one contains the text, and the two below are empty. The bottom box, labeled 'std::math::detail::is\_unsequenced< execution::parallel\_unsequenced\_policy >', has three horizontal compartments: the top one contains the text, and the two below are shaded gray. A blue arrow with an open triangular head points from the top edge of the bottom box to the bottom edge of the top box, indicating inheritance.

std::math::detail::  
is\_unsequenced< execution  
::parallel\_unsequenced\_policy >
