

std::true_type

```
graph BT; A["std::math::detail::  
is_extents< experimental  
::extents< size_type, Extents... > >"] --> B["std::true_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a large gray box representing the base class `std::math::detail::is_extents< experimental::extents< size_type, Extents... > >`. A blue arrow points upwards from the top center of this box to the bottom center of a white box above it. The white box represents the derived class `std::true_type` and is divided into three horizontal sections: the top section contains the text `std::true_type`, and the two bottom sections are empty.

std::math::detail::
is_extents< experimental
::extents< size_type, Extents... > >
