

`std::false_type`

The diagram illustrates an inheritance relationship. At the bottom is a gray box representing the base class, `std::math::concepts::has_const_subvector_type< T, class >`. A blue arrow points upwards from this box to a white box above it, representing the derived class, `std::false_type`. Both boxes are divided into three horizontal sections. The top section of the white box contains the class name, while the other two sections are empty. The gray box contains the full class name in its top section, with the other two sections also empty.

`std::math::concepts  
::has_const_subvector  
_type< T, class >`
