

`std::false_type`

```
graph BT; A["std::math::concepts::has_inner_prod_func< T, class >"] --> B["std::false_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray box representing the base class `std::math::concepts::has_inner_prod_func` with template parameters `< T, class >`. A blue arrow points upwards from this box to a white box above it, representing the derived class `std::false_type`. The white box is divided into three horizontal sections, with the top section containing the class name.

`std::math::concepts`  
`::has_inner_prod_func`  
`< T, class >`
