

std::false_type

```
graph BT; A["std::math::concepts::has_subvector_func<T, class>"] --> B["std::false_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a grey rectangular box representing the base class, containing the text 'std::math::concepts::has_subvector_func' followed by '< T, class >' on two lines. A blue arrow points upwards from the top edge of this box to the bottom edge of a white rectangular box above it. The white box represents the derived class, 'std::false_type', and is divided into three horizontal sections by two lines.

std::math::concepts
::has_subvector_func
< T, class >
