

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class std_math_detail_is_unsequenced["std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >"]
    std_math_detail_is_unsequenced --|> std_true_type
```

The diagram illustrates an inheritance relationship. At the bottom is a class box for `std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >`, which is shaded gray and divided into three horizontal sections. The top section contains the class name. Above it is a class box for `std::true_type`, which is white and also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the lower class to the bottom section of the upper class, indicating that `std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >` inherits from `std::true_type`.

std::math::detail::
is_unsequenced< execution
::parallel_unsequenced_policy >
