

`std::true_type`

```
graph BT; A["std::math::detail::  
is_span< span< T, Extents > >"] --> B["std::true_type"]; style A fill:#808080,stroke:#333,stroke-width:1px; style B fill:#fff,stroke:#333,stroke-width:1px;
```

The diagram illustrates an inheritance relationship. At the bottom is a gray rectangular box representing the base class `std::math::detail::is_span< span< T, Extents > >`. It is divided into three horizontal sections, with the first section containing the class name. Above this box is a white rectangular box representing the derived class `std::true_type`, also divided into three horizontal sections. A blue arrow points from the top edge of the gray box to the bottom edge of the white box, indicating that `std::true_type` inherits from `std::math::detail::is_span< span< T, Extents > >`.

`std::math::detail::
is_span< span< T, Extents > >`
