

std::true\_type

```
classDiagram
    class A["std::math::detail::is_unsequenced<execution::unsequenced_policy>"]
    class B["std::true_type"]
    A --|> B
```

The diagram consists of two class boxes. The top box, labeled 'std::true\_type', has two empty rectangular compartments below its name. The bottom box, labeled 'std::math::detail::is\_unsequenced<execution::unsequenced\_policy>', has two empty rectangular compartments below its name. A blue arrow with an open triangular head points from the top edge of the bottom box to the bottom edge of the top box, indicating a generalization (inheritance) relationship.

std::math::detail::  
is\_unsequenced< execution  
::unsequenced\_policy >
