

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class std_math_detail_is_unsequenced["std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >"]
    std_math_detail_is_unsequenced --|> std_true_type
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded class box for `std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >`. It has three horizontal compartments: the top one contains the class name, and the two below it are empty. Above this box is a white class box for `std::true_type`, also with three horizontal compartments: the top one contains the class name, and the two below it are empty. A blue arrow with a hollow triangular head points from the top compartment of the gray box to the bottom compartment of the white box, indicating that `std::math::detail::is_unsequenced< execution::parallel_unsequenced_policy >` inherits from `std::true_type`.

std::math::detail::
is_unsequenced< execution
::parallel_unsequenced_policy >
