

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class std_math_detail_is_extents["std::math::detail::is_extents< ::std::experimental::extents< size_type, Extents... > >"]
    std_math_detail_is_extents --|> std_true_type
```

The diagram illustrates a class hierarchy. At the top is a class box for `std::true_type`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below this is a larger, shaded gray class box for `std::math::detail::is_extents< ::std::experimental::extents< size_type, Extents... > >`, also divided into three horizontal sections. The top section of the gray box contains the full class name, while the two bottom sections are empty. A blue arrow with a hollow triangular head points from the top edge of the gray box to the bottom edge of the `std::true_type` box, indicating that `std::math::detail::is_extents` inherits from `std::true_type`.

std::math::detail::
is_extents< ::std::experimental
::extents< size_type, Extents... > >
