

std::false\_type

```
graph BT; A["std::math::detail::is_defined< T, Enabler >"] --> B["std::false_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded box representing the base class `std::math::detail::is_defined< T, Enabler >`. It has three horizontal sections, with the top one containing the class name. A blue arrow points upwards from the top section of this box to the bottom section of a white box above it. The white box represents the derived class `std::false_type` and also has three horizontal sections, with the top one containing the class name.
